

Cross Machine Tactical UHP9 PCC TECHWELL for 9mm Glock Mag

Patent Info: techwellusa.com/patents

Lightning-Fast Mag Changes. 60 Second Slide-On, One Screw Installation. Requires no gunsmithing, or alterations to the receiver. 3/32" Hex Wrench included.

Made from super slippery, super durable, Acetyl Delrin. Easy to file off the slight wear over time even for the daily dry-firer.

INSTALLATION: This one is a little special because the screw, while positioned in the best place, is bit of a pain to get to, so we figured out a quick trick: Carefully align the screw into its hole with the hex wrench in place, then give it a light tap or two with whatever is handy (in the photo we just used another hex wrench from the set), then carefully and gently with very little pressure get the first few turns into place, et voila, the rest is easy. One more thing, this screw's only job is to keep the Techwell securely in place fore/aft, so no downward pressure is necessary, just screw down until the head touches the bottom and you're there!

CRITICAL NOTE PLEASE READ - If your lower has an additional coating on it (meaning over the hard coat anodization they all begin with), you will need some

additional installation information BEFORE INSTALLATION. Please sign on to this specific link on our website: <https://techwellusa.com/pcc-coated>
